

Dividing Fractions

Dividing Fractions

▶ Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

Dividing Fractions

▶ Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Dividing Fractions

▶ Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

Dividing Fractions

▶ Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$

Dividing Fractions

▶ Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}}$$

► We saw the reciprocal of a fraction switches the top and bottom

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10}$$

► We saw the reciprocal of a fraction switches the top and bottom

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$.
This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10}$$

► We saw the reciprocal of a fraction switches the top and bottom

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} =$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{9}{10}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{9}{10} = \frac{2 \cdot 9}{3 \cdot 10}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{9}{10} = \frac{2 \cdot 9}{3 \cdot 10} = \frac{18}{30}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{9}{10} = \frac{2 \cdot 9}{3 \cdot 10} = \frac{18}{30} = \frac{3 \cdot 6}{5 \cdot 6}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{9}{10} = \frac{2 \cdot 9}{3 \cdot 10} = \frac{18}{30} = \frac{3 \cdot 6}{5 \cdot 6}$$

Dividing Fractions

► Recall: We defined a fraction $\frac{m}{n}$ to mean:

$$\frac{m}{n} = m \cdot \frac{1}{n}$$

We define the *division* of two numbers as:

$$m \div n = \frac{m}{n}$$

Combining these ideas, we have that:

$$m \div n = \frac{m}{n} = m \cdot \frac{1}{n}$$

So, we can rethink division by n as multiplication by the reciprocal $\frac{1}{n}$. This will be helpful when we are dividing by complicated numbers!

Example 1: Compute $\frac{\frac{3}{2}}{\frac{10}{9}}$

Since we can replace division with multiplication by the reciprocal, we can re-write this as:

$$\frac{\frac{3}{2}}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{1}{\frac{10}{9}} = \frac{3}{2} \cdot \frac{9}{10} = \frac{3 \cdot 9}{2 \cdot 10} = \frac{27}{20}$$

► We saw the reciprocal of a fraction switches the top and bottom

Example 2:

$$\frac{\frac{2}{3}}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{1}{\frac{10}{9}} = \frac{2}{3} \cdot \frac{9}{10} = \frac{2 \cdot 9}{3 \cdot 10} = \frac{18}{30} = \frac{3 \cdot \cancel{6}}{5 \cdot \cancel{6}} = \frac{3}{5}$$
