

Reciprocal Fractions

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

This is mess! We have a fraction in the denominator of our fraction!

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

This is mess! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

To undo dividing by b , we can multiply by b on the bottom

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}} \cdot \frac{1}{b}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

To undo dividing by b , we can multiply by b on the bottom

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}} \cdot \frac{b}{b}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

To undo dividing by b , we can multiply by b on the bottom

As long as we multiply by b on top, also, we are multiplying by 1

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}} \cdot \frac{b}{b} = \frac{1 \cdot b}{\frac{a}{b} \cdot b}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

To undo dividing by b , we can multiply by b on the bottom

As long as we multiply by b on top, also, we are multiplying by 1

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}} \cdot \frac{b}{b} = \frac{1 \cdot b}{\cancel{\frac{a}{b}} \cdot \cancel{b}} = \frac{b}{a}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

To undo dividing by b , we can multiply by b on the bottom

As long as we multiply by b on top, also, we are multiplying by 1

Reciprocal Fractions

► Recall: We defined $\frac{1}{n}$ as the *reciprocal* of n

What if n itself is a fraction? $n = \frac{a}{b}$

What is the reciprocal of a fraction?

The reciprocal of $n = \frac{a}{b}$ is:

$$\frac{1}{n} = \frac{1}{\frac{a}{b}} \cdot \frac{b}{b} = \frac{1 \cdot b}{\frac{a}{\cancel{b}} \cdot \cancel{b}} = \frac{b}{a}$$

This is messy! We have a fraction in the denominator of our fraction!

A fraction within a fraction is called a *compound fraction*

How can we make it less messy?

In other words, how can we make the denominator not a fraction?

Our denominator is a fraction because we are dividing by b

To undo dividing by b , we can multiply by b on the bottom

As long as we multiply by b on top, also, we are multiplying by 1

Conclusion: The *reciprocal* of $\frac{a}{b}$ is:

$$\frac{1}{\frac{a}{b}} = \frac{b}{a}$$
