

Reflecting across the  $y$ -axis

## Reflecting across the $y$ -axis

► We saw that the graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected across the  $x$ -axis.

## Reflecting across the $y$ -axis

► We saw that the graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected across the  $x$ -axis.

Multiplying both sides of the purple equation by  $-1$ , we see:

$$-y = f(x)$$

## Reflecting across the $y$ -axis

► We saw that the graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected across the  $x$ -axis.

Multiplying both sides of the purple equation by  $-1$ , we see:

$$-y = f(x)$$

This helps us see that we are replacing  $y$  with  $-y$

## Reflecting across the $y$ -axis

► We saw that the graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected across the  $x$ -axis.

Multiplying both sides of the purple equation by  $-1$ , we see:

$$-y = f(x)$$

This helps us see that we are replacing  $y$  with  $-y$

The  $y$ -values changing sign causes the reflection across the  $x$ -axis

# Reflecting across the $y$ -axis

► We saw that the graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected across the  $x$ -axis.

Multiplying both sides of the purple equation by  $-1$ , we see:

$$-y = f(x)$$

This helps us see that we are replacing  $y$  with  $-y$

The  $y$ -values changing sign causes the reflection across the  $x$ -axis

If we replace  $x$  with  $-x$  then the  $x$ -values change sign

# Reflecting across the $y$ -axis

► We saw that the graph of  $y = -f(x)$  is the graph of  $y = f(x)$  reflected across the  $x$ -axis.

Multiplying both sides of the purple equation by  $-1$ , we see:

$$-y = f(x)$$

This helps us see that we are replacing  $y$  with  $-y$

The  $y$ -values changing sign causes the reflection across the  $x$ -axis

If we replace  $x$  with  $-x$  then the  $x$ -values change sign

**Conclusion:** The graph of  $y = f(-x)$  is the graph of  $y = f(x)$  reflected across the  $y$ -axis
