

Definition: A solution to an equation is a value (or values) which, when substituted for the variable (or variables) makes the equation true.

Definition: A solution to an equation is a value (or values) which, when substituted for the variable (or variables) makes the equation true.

Example: $x = 3$ is a solution to the equation $2x - 1 = 5$ because

$$2 \cdot 3 - 1 = 5$$
