## Solving Quadratic Inequalities - Example 2

## Solving Quadratic Inequalities - Example 2

Example 2: Find the solution(s) to:

$$
10 x^{2}-4 x+1 \leq 4 x^{2}-5 x+3
$$

Example 2: Find the solution(s) to:

$$
10 x^{2}-4 x+1 \leq 4 x^{2}-5 x+3
$$

In this example, we don't have 0 on one side
So, when we solve the equality, we can not use the Quadratic Forumla.

$$

In this example, we don't have 0 on one side
So, when we ©solve the equality, we can not use the Quadratic Forumla.
So, the first step in solving a quadratic inequality is to get 0 on one side.

In this example, we don't have 0 on one side
So, when we ©solve the equality, we can not use the Quadratic Forumla.
So, the first step in solving a quadratic inequality is to get 0 on one side. Which we can do by Subtracting $4 x^{2}-5 x+3$ from both sides:
