More on Relations

More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

Definition: The *domain* of a relation is the set of $x-$values

More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

Definition: The *domain* of a relation is the set of $x-$values

Definition: The *range* of a relation is the set of $y-$values

More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

Definition: The *domain* of a relation is the set of $x-$values

Definition: The *range* of a relation is the set of $y-$values

Definition: A *function* is a relation so that no two pairs have the same $x-$value. That is, no $x-$value shows up twice.

More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

Definition: The *domain* of a relation is the set of $x-$values

Definition: The *range* of a relation is the set of $y-$values

Definition: A *function* is a relation so that no two pairs have the same $x-$value. That is, no $x-$value shows up twice.

Example 2: $\left\{(1, 4), (-2, 3), \left(\frac{1}{2}, -2\right), (1, 1)\right\}$

More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

Definition: **The *domain* of a relation is the set of $x-$values**

Definition: The *range* of a relation is the set of $y-$values

Definition: A *function* is a relation so that no two pairs have the same $x-$value. That is, no $x-$value shows up twice.

Example 2: $\left\{ (\mathbf{1}, 4), (-\mathbf{2}, 3), \left(\frac{1}{2}, -2\right), (\mathbf{1}, 1) \right\}$

Domain $= \left\{ -2, \frac{1}{2}, 1 \right\}$
More on Relations

Definition: The *domain* of a relation is the set of $x-$values

Definition: The *range* of a relation is the set of $y-$values

Definition: A *function* is a relation so that no two pairs have the same $x-$value. That is, no $x-$value shows up twice.

Example 2: $\left\{ (1, \mathbf{4}), (-2, \mathbf{3}), \left(\frac{1}{2}, -\mathbf{2}\right), (1, \mathbf{1}) \right\}$

Domain $= \left\{ -2, \frac{1}{2}, 1 \right\}$

Range $= \{ -2, 1, 3, 4 \}$

# More on Relations

Definition: A *relation* is a set of ordered pairs (x, y)

Definition: The *domain* of a relation is the set of $x-$values

Definition: The *range* of a relation is the set of $y-$values

Definition: A *function* is a relation so that no two pairs have the same $x-$value. That is, no $x-$value shows up twice.

Example 2: $\left\{(1, 4), (-2, 3), \left(\frac{1}{2}, -2\right), (1, 1)\right\}$

Domain $= \left\{-2, \frac{1}{2}, 1\right\}$

Range $= \{-2, 1, 3, 4\}$

This relation is not a function since 1 is an $x-$value twice
