

What do you mean $\sqrt{x^2} \neq x$?!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4}$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$: Not quite true here!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$: Not quite true here!

$\sqrt{x^2}$ was positive even though x is negative, because we squared x

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$: Not quite true here!

$\sqrt{x^2}$ was positive even though x is negative, because we squared x

So, $\sqrt{x^2} = x$ if x is positive

And $\sqrt{x^2} = -x$ if x is negative (which means $-x$ is positive).

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$: Not quite true here!

$\sqrt{x^2}$ was positive even though x is negative, because we squared x

So, $\sqrt{x^2} = x$ if x is positive

And $\sqrt{x^2} = -x$ if x is negative (which means $-x$ is positive).

$$\sqrt{x^2} = \begin{cases} x & \text{if } x \geq 0 \\ -x & \text{if } x < 0 \end{cases}$$

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$: Not quite true here!

$\sqrt{x^2}$ was positive even though x is negative, because we squared x

So, $\sqrt{x^2} = x$ if x is positive

And $\sqrt{x^2} = -x$ if x is negative (which means $-x$ is positive).

$$\sqrt{x^2} = \begin{cases} x & \text{if } x \geq 0 \\ -x & \text{if } x < 0 \end{cases}$$

We've seen this function before! It's the absolute value!

What do you mean $\sqrt{x^2} \neq x$?!

At first glance, it seems like:

$$\sqrt{x^2} = x$$

Let's compute some example:

If $x = 2$, then $\sqrt{x^2} = \sqrt{2^2} = \sqrt{4} = 2$: Looks true here!

If $x = 3$, then $\sqrt{x^2} = \sqrt{3^2} = \sqrt{9} = 3$: Looks true here!

If $x = 5$, then $\sqrt{x^2} = \sqrt{5^2} = \sqrt{25} = 5$: Looks true here!

This guy is crazy!

All of these examples make it really seem like $\sqrt{x^2} = x$

But these examples have something in common. They are all positive!

If $x = -2$, then $\sqrt{x^2} = \sqrt{(-2)^2} = \sqrt{4} = 2$: Not quite true here!

$\sqrt{x^2}$ was positive even though x is negative, because we squared x

So, $\sqrt{x^2} = x$ if x is positive

And $\sqrt{x^2} = -x$ if x is negative (which means $-x$ is positive).

$$\sqrt{x^2} = \begin{cases} x & \text{if } x \geq 0 \\ -x & \text{if } x < 0 \end{cases}$$

We've seen this function before! It's the absolute value!

Conclusion: $\sqrt{x^2} = |x|$
